

Introduce

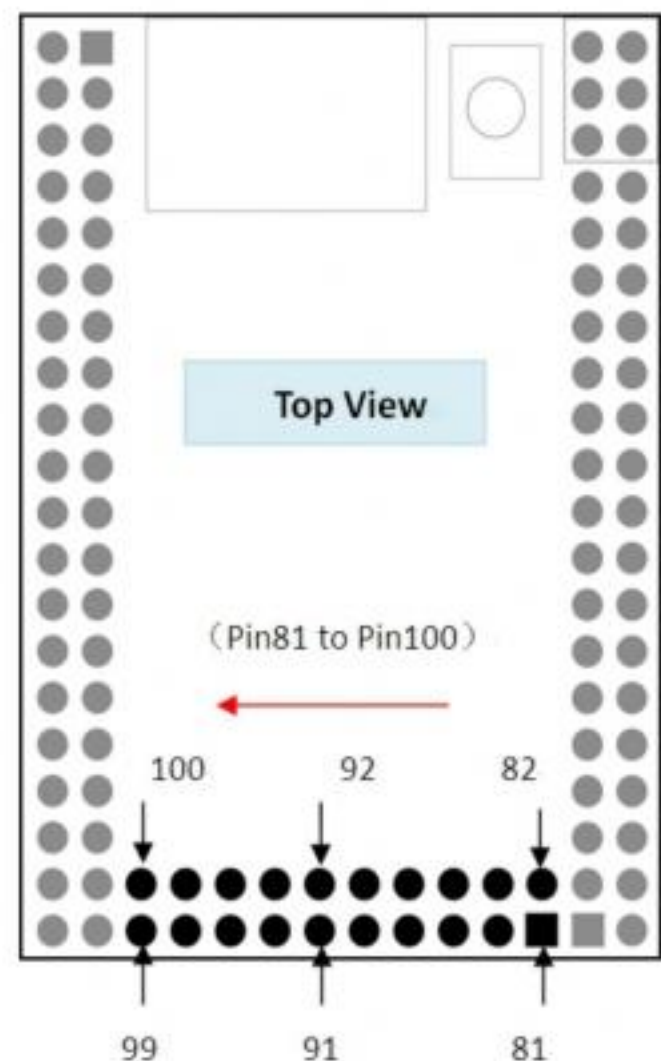

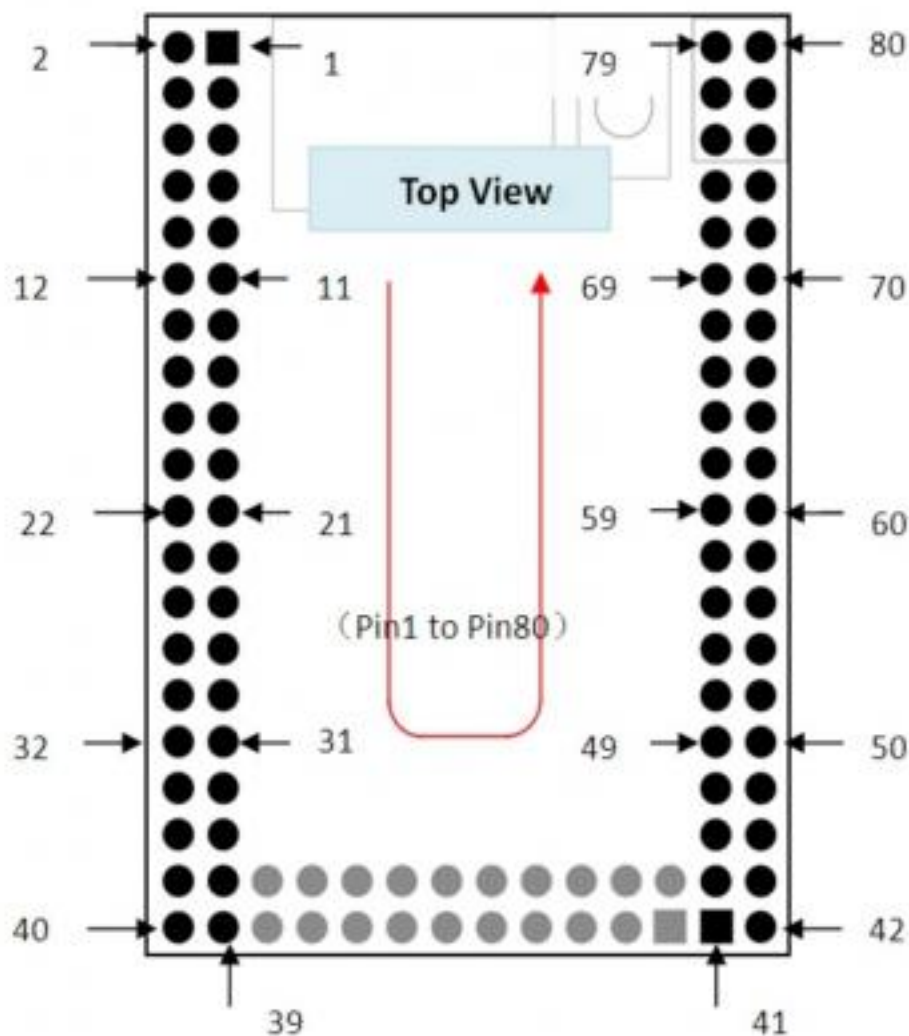

Mega2560-CORE is a small, complete and breadboard-friendly board base on the ATmega2560. Its design is based on the Arduino Mega2560, so we can use it as a Arduino Mega2560 development board. In a different place, it lacks only a 6-foot download port and a reset switch. Reducing the hardware circuit that can we reduce the power consumption and the cost. Mega2560 -CORE has a matching download line and the other one end of the download cable is a USB interface, so it is very convenient for use.

Features

Microcontroller ATmega2560
Operating Voltage (logic level) 3.3V or 5 V
Digital I/O Pins 54 (of which 15 provide PWM output)
Analog Input Pins 16
DC Current per I/O Pin 40 mA
Flash Memory 256KB
SRAM 8 KB
EEPROM 4KB (ATmega2560)
Clock Speed 16 MHz
Low power consumption, low cost

Indicator Description

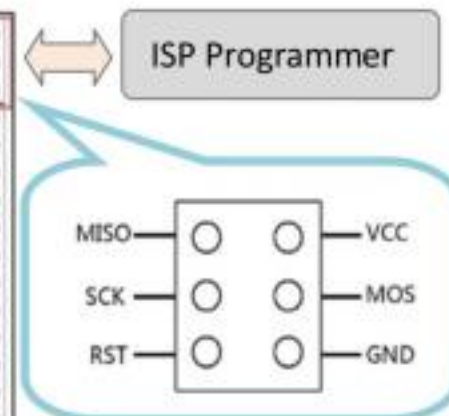

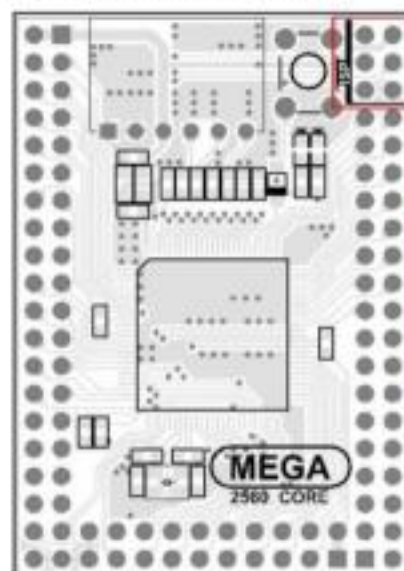

Programming Connection

There are two way to download and they are as follows:

1、 Upload via Arduino AVR

2、 Programming via ISP
